Article published on January 2nd 2012 | [Technology](#)

It's not news anymore to hear that new LED displays are installed on sport fields. Either for indoor or outdoor, stadiums and sports fields love to use them to broadcast images of the event, keep audiences up-to-date with the scores and impress the sponsors by vividly displaying their commercials. They are always bright, colorful, lively and eye-catching and that is why every single field of some kind has at least one LED display. However, have you thought about installing an LED display on your golf course?

Golf courses, during competitions, use a huge and stagnant billboard to track every golfer's score traditionally during an event. It requires several people to look for the golfer's name, step on the stair and replace the score and names as the competition progresses. Hundreds of cards with different numbers and letters are piled and after the event, it takes hours to organize those cards alphabetically. Somewhere else in the golf course, audiences are trying hard to figure out what's going on on the canvas screen where a projector's image is hardly showing up under sunshine. It's time to buy a better kind of billboard from an LED display manufacturer.

The LED display saves your course time, first of all. Connecting it with a PC, you can just sit there and flip the score as fast as you can type it in. In addition to scores, the programmable display is available for various messages. It is so flexible that the screen can be divided into several parts to show the scores, videos, images or commercials simultaneously. The vivid color, high resolution and wide viewing angle make it perfect for an event. Either on a beautiful sunny day or a windy and rainy day, your LED display will still perform perfectly. The high brightness will still show a clear image even under direct sunshine and because of the waterproof cabinet, it can be run when there is a huge downpour.

Even off the event season, the LED display is still very helpful. It can forecast the upcoming renovating of the golf course, show the wind force and temperature of the day and tell golfers about the traffic on the course. The LED display draws much more attention than any traditional kinds of billboards and is durable, energy-efficient and extremely versatile. There are already some golf clubs in USA starting to replace billboards with LED displays. Ordering billboards from a LED display manufacturer will definitely be the next trend.
