Types of Projector Screen Fabrics - an Insight by Julia Roger

Article published on January 17th 2012 | Technology

Purchasing a projector screen is not trouble-free merely because of the reality that most people do not have enough information regarding what types would suit them greatest and what are their choices. As a purchaser, one is somewhat in a fix regarding which one to purchase. There are a lot of aspects which will lead one to buy the projector screen..

There are two kinds of fabrics used in making projector screens. A random check will suggest you that they are only the ordinary stained plastics used in numerous household tasks; however, there is a huge distinction between the two. They have superior reflecting capacities, and therefore, can present the pictures to the audience with superior contrast trait. They are tried and tested many a times by the manufacturers before releasing to the market so that the consumers get dynamic visuals.

The first of the projector screens are the Fiberglass Matt White Projection Screen. White vinyl is used as the reflective surface while fiberglass is used to laminate it. Matt white is used as it aids in the right diffusion of light uniformly in all directions. This permits the audience to view the image from any angle with equal ease. After that, there is the Glass Beaded Projection Screens. It too has a unique kind of fabric behind it and provides a clearer vision than the former because this projection screen has a tighter angle for viewing. Next, there is, in addition, the Vinyl Projection Screen that does not have any type of backing and is made up of 100% vinyl. Its main features are its excellent contrast and consistent flat surface.
