USB Charger: What it has got in Store for you by Julia Roger

Article published on July 3rd 2012 | Technology

Majority of people nowadays use electronic systems with inbuilt batteries that need charging every now and then.. There are different charger varieties available in the market today. USB charger is one among them. The best part about these devices is that they allow you to charge almost every high end electronic gadget under the sun. Hence, right from mobile phones to an iPod to a camera even-the USB charger makes sure that all your gadgets continue to function. These chargers normally come with a 5v power rating which means that when the device gets connected it can receive up to 5 volts of power and therefore draw up to around 500 mile ampere. Needless to point out, any electrical device that fits into the above criterion can be charged using the USB charger. However, those requiring more than 500 ma would need improved systems. Operating the USB charger is as easy as having a piece of cake. All you need to do is fetch a USB port, and get the two ends connected.

Despite being highly efficient, USB charger comes with certain basic problems. The first among these is that it can offer up to only around 100 to 200 ma. Now, this may not always be enough to get a device charged. However, there is a unique solution available in the form of the USB hub. You can always use the USB charger on the hub and charge several devices from a single computer or for that matter, any other port.

There are different varieties of charging accessories available in the market today that feature a USB port. The facility is undoubtedly great. Hence, if you are a frequent traveler or for some reason your work demands you to use multiple devices at one time, then getting a USB charger can help solve a number of problems.
