Article published on May 9th 2012 | Technology

Research laboratories, universities and government institutions can sometimes sell used laboratory equipment, when they want to free up space for the laboratory or buying new equipment.

Tips for Selling your Lab Equipment

How to contact the seller of laboratory equipment is one of your best options when it comes to getting a good price. A few tips to consider, and to sell are:

Find a good buyer: This should be preferably certified CCR vendor on the Internet. These vendors can provide reasonable prices.

* Check shipping regulations: Although generally no rules relating to the online sale of laboratory equipment, to see if there are any regional or state your point of shipping regulations.

* Proper description: Make sure that the equipment is properly described, when you sell it online or otherwise.

* Catalog posts: Post your industrial product directories. This is where many buyers will instinctively look for.

* Equipment Condition: Make sure you know the condition of the equipment you sell in order to assess the actual value and price.

* Specifications - Most dealers have a good idea of ??the variety of laboratory equipment, the manufacturer and model. Enabling them to produce, make, model, year of use, and can help you get the right price for the correct information about a year.

* A reliable dealer - to sell its laboratory equipment, there is always a reliable partner and an experienced trader. The trader may make a good assessment of devices you want to sell and provide you with a good deal.

CCR-certified vendors to update the equipment used

Sell ??your equipment for laboratory-certified CCR vendor will also ensure that equipment is properly used. These dealers not only sell new products, but they also sold them to update the software. Various equipment is ready to find a market for them:

The most obvious difference of these materials is that the glass will break more easily than plastic. If you drop a glass tube, compared to a plastic tube,Our unique line can be used as a strong plant hangars, as well as hummingbird feeders. it will probably be destroyed. However, plastic pipes scratches very easily. Placed outside of the usual elements such as sun and rain, the plastic tube is dingy yellow, and the glass tubes are more resistant to weather conditions.

chemistry analyzers, electrolyte analyzers, immunology analyzers, hematology analyzers, coagulation analyzers, spectrophotometers, microscopes, balances, and centrifuges.

After they buy the equipment they have it during the upgrade process before it is sold at a reasonable price. Small laboratories and other equipment operating in a very low budget pay for

such purchases equipment.Trained experts thoroughly inspect the equipment, put in different phases of renovation and if necessary, replacement of parts. The laboratory instrument quality check to ensure that it meets the original manufacturer's specifications. Recertified products are offered for sale with warranty parts, usually 90 days.

In addition to service contracts, time and material service visits and domestic service, many vendors also offer reagents, controls and supplies along with the recertified products sold.

Find the right buyer

When you sell your laboratory equipment, it is important to carefully search the Internet to find the right buyer. Look through the yellow pages and online catalogs, a CCR certified dealers in the auction. Comparing the prices of various dealers and services can help you find the right buyer.
