Article published on December 28th 2011 | Technology

With the number of electronic gadgets increasing rapidly with time, people nowadays are using more and more number of gadgets that comes with inbuilt batteries that needs to be recharged periodically to keep the gadget functioning. There are several types of equipment chargers that are available in the markets today and usb charger is one of the commonest and widely used in the family.

It is one of the most versatile accessories that you will get to find as starting from iPods to mobiles, from MP3 players to cameras, they are compatible with almost every electronic gadget and thereby capable of charging the batteries of such devices. It is regarded to be a computer equivalent of traditional AC outlet but it does not require a computer to function.

Generally, they have a power rating of around 5V which indicates that they are capable of receiving up to 5V power and drawing up to 500mA current. Any electronic device that falls within this range can easily be charged using an usb charger. However, devices with greater current or voltage ratings should never be used with these accessories doing which is going to cause serious damages to both the equipments.

Some electronic equipment, such as DVD players comes with inbuilt usb hub which many people tend to use for charging other electronic equipments. Apparently, it is fine but the problem is that in such cases, the devices are not going to deliver more than 100-200mA current which might not be sufficient to full charge the equipments but be sure that it is not going to cause any damage to the devices. They are considered to be highly convenient and useful as they can be used from any plug point or ports from almost anywhere and everywhere.
