A simple guide to the different types of television aerials by Marcella Jaylon

Article published on March 5th 2012 | Television

If you live in a residential property where you have television aerials on your roof, then you may have noticed from time to time when there is violent wind conditions the reception which you receive may not be consistent.

This could be because the aerial is being moved which will cause your channels to become distorted. A television aerial is key because they enable you to receive the correct channels.

There are a handful of television aerials which you may not know about. The different types of aerials are listed and the reasons why you would have each type installed.

One of the most popular aerials is the Yagi aerial which is attached to a tall pole sitting on top of your roof or the side of your home. The Yagi aerial has prongs on the side which are also called elements. The more small elements a Yagi aerial possess the better it will pick up signal. These aerials are used when transmitting analogue TV reception. Which is why they used to be so popular, prior to the digital switch.

A Grid aerial is different type of aerial which has shown to improve viewers television reception in areas which have little reception. These areas are also known as high gain aerials but do not tend to work with Freeview transmission.

Alternatively you could have an indoor aerial instead which are generally not used for reviving free-view reception. These tend to work best in areas which are more spread out. There are only a small amount of properties which use indoor aerials for their television signals.

You could also choose to have a Digital high gain aerial fitted. This type of aerial has two reflectors which usually have 100 elements, so that it picks up more reception. Digital High gain aerials are more expensive but are great for families who want to watch TV but which live in poor reception areas and would not be able to watch them without this aerial. High Wycombe aerial installation by www.mediastreamaerials.co.uk could get this aerial installed in your home.

There are a number of alternatives to the aerials above such as a satellite dish which you can have fitted by a number of satellite dish installers which then means you will have access to many different channels. The beauty of a satellite is that you can also record programs and store them so that you can watch them as many times as you want to.

Not only are there many types of aerials you should also use a company which has experience in fitting different types of aerials. It may be stressful choosing the correct company, which is why you really should choose a company which has a good local reputation or which has been recommended by a family member or friend. Always make sure that you use a qualified company who have not had any claims made against their business.

Choosing a company which has been mentioned by a family member If you are still not certain then you should take a trip to your friends home so that you can see the installation and how well the aerial was fitted.

We hope that the information provided has helped you to understand about on the different aerials available for your home. Reading the article may have helped you to choose the correct article and get the most out of your television, so that you can enjoy it to the full.
