There are probably thousands of chances when it comes to volunteering in overseas locations. You might be toying with the idea of spending a significant period of your gap year volunteering. You might also be thinking about taking a break from your profession or you are a veteran traveler seeking volunteer work to expand your purview of lifetime experiences. Anyone can take part in such a great service overseas. However, what is the specialty of volunteering in Africa?

For numerous individuals, it is all about volunteering amidst the African wildlife. There are destinations such as the Kruger National Park where you can make a great contribution by bringing back the African lions to regions where their numbers have been radically decreased. Wildlife buffs won't have a better excitement than moving through the wilderness with a big male feline by their side!

Evidently, lions are not the sole endangered animal demanding attention and you will come across so many other gap year volunteering chances. You can also work for the conservation of elephants, leopards, rhinoceros, hippopotamus, and wild dogs. The massive diversity of African fauna is one of the continent's largest attractions, whether it is for holidaymakers who want to be a part of safari or others who get involved in a volunteer project.

Volunteering in Africa is not confined to wildlife fans only. Even though the continent is endowed with huge natural wealth, picturesque locations and cultural variety, it is deplorably one of the poorest regions of the planet. All sorts of assistance need to be provided, whether it is education, health, infrastructure development or a host of other fields. In amazing places such as Mozambique, there are noticeable disparities between resorts and the dwellings of inhabitants who seek your assistance in numerous ways.

In countries like South Africa and Mozambique, there are apparently countless spectacular beaches. However, apart from enjoying those beaches, you need to work in many small towns where children are leading their lives in miserable housing conditions. You can be a means to transform their lives by imparting education and carrying out other community development activities. There is no requirement to possess a high level of qualification. All you need is the motivation to lend a helping hand.

Gap year volunteering in Africa is full of opportunities and demanding situations. Every wonderful location has its share of fascination as well as grievous issues that need to be addressed urgently. You will get enough opportunities to do volunteer work in those areas and make a notable contribution in augmenting the wildlife, natural resources and communities. It actually does not matter whether you spend a couple of weeks or quite a few months.

If you are thinking about volunteering in Africa, always strive to set aside some time for yourself so that you can relish the natural beauty around you. Make the most of the adventurous expedition when you're not lending help to others. At times, you can lie down on the tropical beaches of Mozambique and relax yourself! There is also the chance to go fishing with the locals, snorkel the adjacent reefs and swim in the pristine waters of the Indian Ocean, or party all night at a beach pub. Hence, fun is offered in abundance when you're in Africa.
