

Article published on December 15th 2011 | [VOIP](#)

VoIP is the latest technology that has surpassed the traditional telephone and mobile companies. VoIP is "Voice over Internet Protocol". The simple understanding of VoIP is that one can make or receive phone calls anytime by using internet connection to any place of the whole world. VoIP neither need heavy hardware systems nor wiring system, what it needs is a computer system or a laptop to install VoIP and also an internet connection. VoIP is very beneficial for business users as it is very cost effective. Though there are many more benefits of VoIP but "low cost" is the main reason for switching many businesses to VoIP.

Basic Method of Working

The basic working technique of VoIP technology is to convert the voice signal, an analog one into the digital signal (Computer understandable language) which is then transferred to the other computer through internet connection and is again converted in to the analog signal which is understandable by human (listener).

Salient Features of VoIP

VoIP is getting very popular day by day. VoIP technology has proved to be an amazing invention and has created a new mode of communication by using internet connection. VoIP technology has many salient features that have attracted many people towards it.

- 1.) Making and receiving phone calls has become very easy and cheap. International calls, local calls or any long distance calls are easily made through VoIP internet telephony at a very low cost. That's why most of the businesses prefer VoIP service.
- 2.) One can easily get the details of incoming and outgoing calls from his computer by using VoIP. As all the numbers are stored in the calls record feature in the computer so one can get the details of the incoming and outgoing calls.
- 3.) You can use this VoIP phone service at any place of the world where you can get the internet connection. Even you can also use the same number from anywhere but the only requirement is to have the internet connection. For example; if you are on tour to any other country and you have carried your laptop with an internet connection along with you then you can attend your phone calls or business meeting there also without any issue of the place.
- 4.) VoIP is economically very beneficial. The call rates are very cheap. Even if you have to make overseas calls then also it is very cost effective. One can talk for long hours at a very low cost. By using VoIP, you can save 80-90% on your regular monthly phone bills.
- 5.) You can shift your business from one place to another if you have VoIP telephone service. As there are lots of troubles come on the way of shifting in case of landline phones because of the wires attached. By using VoIP, there are no issues of wires or any heavy hardware equipments.
- 6.) By taking a single VoIP connection, you can create many internal numbers for every employee. Also, the internal calling between the departments within the office is absolutely free of cost.
- 7.) There are many other advanced optional features provided by various VoIP service providers. Some of them are: 3-way conference, call forwarding, call waiting, simultaneous ring, speed dialing,

voice mail facility, caller ID, caller ID block, do not disturb, anonymous call rejection and many more. All these features are almost free in the basic plan of service providers. Moreover, one can also manage their VoIP account online from any place of the world.
