The Best Cloud PBX System for Small Business by James Allen

Article published on March 6th 2012 | VOIP

Before deciding which will be the best cloud PBX system for your small business, you need to know all about what cloud PBX system can offer. If you are running a small business you have enough problems to worry about but your phone system will cease to be one of them - if you have opted for Cloud PBX system.

A Cloud PBX system can make a big difference if your small business is looking for an efficient and cost-effective system. The term PBX system can be pretty misleading and confusing till you understand what it exactly implies. Cloud PBX is nothing more than a phone service which is provided through the internet, instead of a traditional phone line.

Once you start using a Cloud PBX, you can cease to bother whether you have a scalable, flexible, and reliable, business phone system. Because of its manifold benefits, more and more business houses are appreciating the advantage to switching over to cloud PBX phone systems.

Because the whole system operates through the internet, you can have a telephone connected to the hosted PBX service sans geographic borders. The Cloud PBX can connect employees in different states while all being included within the same system. This makes it lot more comfortable to call and manage business aspects even if the phones are distantly set apart.

The phone service provider is wholly responsible for the maintenance of your cloud PBX system. You can feel relieved of all worries and start focusing on other critical areas of your small business. This will surely improve the productivity at your workplace. Apart from the maintenance and hassle free advantages of Cloud PBX, there are many other reasons that make Cloud PBX increasingly popular amongst small business owners.

When choosing the best Cloud PBX phone system for your small business, try to get a phone system that is sufficiently advanced, reliable, flexible, simple, cost-effective and ready to become operational in about 15 minutes. Make sure you are not asked to buy any equipment and everything is hosted for you off-site. It is preferable that you work with just one company instead of two or three.

You can agree to pay one flat fee, regardless of time usage on the phone. Make sure the provider maintains the equipment, hosts the software and make the upgrades. To your customers, it should make no difference - whether they are talking to your main office, leaving a voice mail, or speaking to someone working from home - it all must happens seamlessly.

It is preferable that you select a provider who owns the technology - rather than leasing it. That means they can respond quickly and provide constant upgrades to their services. Make sure that the provider offers 24 x7 back up support as you can not risk your business communications. Losing incoming business calls or incurring the displeasure of your customers can adversely affect your business.

Avoid providers who are driven by commercial greed and ensure that the quote you select has no hidden fees, taxes, or charges. You should simply be paying the price they quote and nothing more. There are several Cloud PBX service providers who are totally dedicated and consider their customer as Kings. It will be good if the provider understands the nature of your business and is sensitive to your communication needs.
