Dynamic Website, Via Dynamic CMS - Hire Joomla Developer Today by Marshal

Article published on April 4th 2012 | Web Design

The biggest boon to website development is attributed to the clean departure from static websites to more dynamic ones. Developing static websites is quick and cost effective, however it requires constant assistance of a professional developer to perpetuate any changes or update on the portal. On the other hand, dynamic websites are mostly backed by features such as Content Management System (CMS), e-commerce mechanism, discussions boardsâ€™ etc expediting up- gradation and maintenance of the website.

Developing a dynamic website may be an expensive endeavor but eventually impacts the functionality. Drupal, WordPress and Joomla are award winning content management systems which have taken website development to a whole new level. CMS driven websites are easier to update, search engine friendly and opens the window to collaborate and converge, thereby imparting the website an interactive and a distinctive persona.

Joomla is one such content management system that makes it effortless for anyone to update and manage content on the website. Joomla has made a considerable headway as a content management system. The etymology of the word Joomla can be traced to the Swahili word â€œjumlaâ€•, meaning â€œall togetherâ€• or â€œas a wholeâ€•. The derivate of the world explains it all. Joomla is cons the best CMS option for all sort of websites ranging from e-commerce to community portals, personal blogs and much more. Ease to use and manage, the wonders of Joomla may be unveiled by resorting to hire a Joomla developer with apt skills and experience.

The biggest attraction of Joomla platform is its open source orientation. Witten in PHP language, Joomla employs the MySQL database to create websites and portals. It is endorsed by a community of developers who constantly extend their support to give Joomla a competitive edge over other forms of CMS in the development market. It is estimated that as of March 2012, Joomla has been downloaded more than 30 million times, evidently justifying the immense popularity of the platform. Only second to the WordPress, Joomla has made a long way since its inception in 2005. Joomla is infused with all the necessary features for improved performance such as web indexing, RSS feeds, blogs, forums, polls, calendars and room for varied

international language, thereby making it the most preferred CMS.

When exploring the option to Hire Joomla Developer, it is imperative to judge his/her skills in compliance to the project at hand. However, a dedicated Joomla developer must be able to design, integrate and install component and module, customize, modify and develop customized template within the purview of the Joomla platform.

In order to hire Joomla Developer with talent and skills, consider outsourcing the resource from India. To reduce the development cost, as an offshore client, hire Joomla developer from India. The trend to outsource overseas projects in India is largely successful because it offers optimum quality of work at fraction of a real cost, therby enabling companies to save nearly 60% of their development cost. If, you have a Joomla project at hand, why not hire Joomla Developer from India?
