Endless Opportunities to Diversify Your Online Business with PSD to Magento

by Adam Parker

Article published on January 5th 2012 | Web Design

Magento is the preferred choice of most developers when it comes to building an online store. However in the highly competitive world of ecommerce having an online store isnâ€™t enough. You need to create and mark for yourself and stay ahead of the rest. You can easily do this by opting for a PSD to Magento store which is what most successful stores are doing. PSD to magento conversion leads to a lot of new opportunities for your business in the market as the templates designed are flexible and custom built to meet your business needs.

A store developed using PSD to HTML/Magento allows you to add endless number of products to it. Thus you can start with a small online store and expand its range of products as time passes by. The products can be easily categorized and optimized while they are listed. You can add review and ratings to each of the products which makes it easier for the customers to make an informed choice which in turn will add to your sales and revenue.

You can make use of third-party plugins such as currency converters which allow you to target a global market. The list of such third-party plugins is endless, from offering redeemable coupons to offering advanced carting solution and comparing products they let your online stores have features which attracts the customers and increases your conversion rate. PSD to Magento conversion allows you to stay ahead of other online store with such advanced features.

Advantages of PSD to Magento Conversion

Branding â€“ How important is branding to your business? When you convert PSD to CSS/Magento you get a unique looking website which is themed around your business. This gives you high brand recognition and allows you to easily connect with the audience. Even a kid recognizes eBay and Amazon! All the features in this website are custom built to meet the niche demands of your business.

Online Visibility â€“ The performance of a website on the search engine is a direct result of the quality of the codes used. In a PSD to Magento website your developers would hand code the websites which is high on quality. Search engine crawlers give preference to websites with cleaner codes and your website will attain a high ranking in the search engine.

Validation and Compatibility â€“ For a website to be successful it needs to be W3C validated and cross browser compatible. W3C validation lets you get rid of the coding errors while cross browser compatibility ensures that your website has a wider appeal as it appears and functions uniformly across all the browsers.

To make maximum of the opportunities of PSD to Magento conversion you need professional developers by your side. Coding the PSD file, using third-party plugins and Magento integration should be done with precession and needs expertise. Hiring expert developers ensures you a higher return on investment when it comes to developing your online store from scratch using PSD to Magento.
