Ensure Reliable Joomla websites with PSD to Joomla Conversion by Justin Spencser

Article published on February 6th 2012 | Web Design

Joomla is an all-powerful open source content management system and a favorite with many businesses around the world who manage their websites using this platform. To experience the sheer power of this platform and to have reliable websites you need to opt for PSD to Joomla conversion while developing your website. Because of plethora of benefits this web development technique offers it is one of the most appreciated and widely used by industry experts. In this technique developers convert PSD to HTML or XHTML which is then integrated into the Joomla content management system.

When you convert PSD to Joomla you not only get a website which is visually attractive and highly function, you also get a website which can be easily managed by anybody in your organization. This is a highly reliable platform for managing websites of all genres Ã¢â‚¬â€œ corporate websites, blogs, socia networks, and ecommerce websites among others. These websites use the awesome power of semantic PSD to HTML conversion to improve their performance in the search engine.

Highlight of PSD to Joomla Websites

1. When you convert PSD to Joomla you can get fully customized look and functionality in your website. The website is designed from scratch in Photoshop than the developers convert PSD to CSS/HTML to make the images web compatible. You can also make use of third-party plugins which bring in added functionality to your website.

2. These websites are developed using semantic coding techniques where each and every element of the website is defined making it easy for the search engine spiders to index your website high. Most professional web development companies manually code the website which ensures better quality of coding.

3. One of the major steps in PSD to Joomla conversion is the W3C validation which does away with any of the errors that exist in the codes. This improves the load time of your website on the web browser along with the Cascading Style Sheet allowing you to cater to customers using slow Internet connections.

4. Another point when it comes to achieving a reliable website with PSD to Joomla conversion is with cross browser compatibility. You can be rest assured that your website will function uniformly across all major web browsers such as Internet Explorer, Firefox, Chrome, Safari and Opera.

5. Last but not the least PSD to Joomla websites can be accessed on the mobile devices as they can be made device independent using plugins which adds to the reliability of your website and increases traffic to the website.

A good PSD Design to HTML/Joomla website need to be backed up with high quality development and to ensure this you must work only with the professionals in the business. They should have sound knowledge of PSD to HTML conversion and should be skilled in hand coding which ensures higher rankings in the search engines. Another thing to look for in the web development company that you hire for your business website is good support services as this ensures you a smooth sailing process.
