How to become a web designer by [Rajkumar Kaushal](#)

Article published on May 22nd 2012 | [Web Design](#)

Web designing is a field which is getting famous every coming day. Almost every big organization need to publish their products and their business news on internet. For that, they require a website of their own or a series of small web pages. A web designer can do the task for them so if you are choosing a field for your career, becoming a web designer in this Era will be a great option. In this article, we are going to mention all important tips which are required to be a successful and professional web designer.

First of all, you need to realize the importance of web designing field and how you may earn good money with little time and more focus. To be successful in any field, you will have to be patience and dedicated and once you have achieved that, no one may stop you from being a famous man. Technically speaking, you will have to get a good vector graphic illustrator and some other software which are mandatory to start learning this field. This software may cost you some dollars but you need to be skilled in these in order to be a good web designer.

There is no harm in looking at the work of some professionals as it will help you understand what quality clients may demand from you. In addition to that, for beginners there are some already made templates are available which must be used for future references. You should also get some skills on XHTML which stands for Extensible Hypertext Markup Language and CSS which stands for Cascading Stylesheets. These are required as this software is the foundation in the field of web designing and a professional web designer should always be equipped with these skills.

CSS and XHTML usually does not require any programming skill but in some cases, you will have to do some inner coding to adjust the back end layout of your web page. Above mentioned software are used to create static web pages but for dynamic web pages, a web designer will have to learn the software like PHP and MYSQL. In addition to all above mentioned software there are some more tips which are required to make your client happy for example you should try to listen to them and fulfil their desires as much as you can. This will make you a professional web designer.
