Joomla an easy way to website building by [Kimberly Penney](#)

Article published on April 15th 2012 | [Web Design](#)

Joomla is a content management system (CMS) that allows any individual to manage and maintain his website with little or no knowledge of web design and development. It is an open source software that makes its download simple and easy. Its free and no charges are levied for its download. Joomla offers all the required features needed for adding and updating images, navigation menus, content pages and much more. And this is getting increasingly popular these days.

Joomla web design provides unparalleled features like ease of third party module integration, customization ease and ease with its update etc. this is generally used to develop several aspects of Joomla module development like catalogue, e-commerce websites, estate agency, forum, project management, property rental, comments, calendar, news and reviews. In fact Joomla has made the designing of various websites much easy and simple. Anything you need online commerce, corporate websites, government applications, business websites, job portals or any other, joomla module development can meet your specific needs.

Joomla website design is much similar to any other web page design. If you are looking for expertise offering Joomla customization you wish to keep the HTML codes simple and this will make your website search engine friendly as well. That means most of the Website codes will be in the CSS file.

Joomla is an open source software that is much easy to install. It is user friendly besides being apt for search engine marketing. The one with just the basic knowledge of computers can make and create his website and can also easily manage it. To make the use of this open source software easy, one can hire any website design services for Joomla installation. Joomla websites are quite easy to access and that's the reason why web designers and developers find it easy in making websites for their clients using Joomla.
