Make your PSD Design Friendlier to Search Engines with PSD to Drupal Conversion
by [Justin Spencser](#)

Article published on January 13th 2012 | [Web Design](#)

Drupal is a powerful open source publishing software package. It helps in organizing modular contents on web. The PSD to Drupal conversion is your one stop answer for all your large scale custom website needs. Drupal enable you to add high end features to you website like, discussion forums, web casting shopping cart integration and attractive photo gallery and much more. In the competitive world, a website no longer serves all its needs. You need to have a website that stands out of the crowd with extensive features to attract potential readers and costumers again and again. Convert psd to drupal and PSD to HTML to get yourself a high end and highly scalable website.

The psd to drupal offers reduction in the cost. The time for designing PSD to CSS/HTML is quite less. In the Drupal environment every website is created with W3C validation, i.e. following the ethics of the W3C. so, these websites always works smoothly. The psd to Drupal allows for perfect semantic coding, that means each of the section of the website is at perfect place. Another benefit is its cross browser platform. It makes website available on all major browser platforms including the mobile devices.

PSD to Drupal conversion helps in making a website more search engine friendly.

1. Drupal is a search engine friendly CMS. It provides you with a database to store all your contents. Its CMS service keeps design of the site separate from its contents. It allows you to update anything easily and efficiently. Drupal also offers advance URL control, which means you can add a custom URL to each of your content on Drupal. The feature like content construction kit allows you to create new contents types and custom views without writing any short of codes.
2. The PSD to Drupal converted websites are user friendly and loads easily on the browser. This feature can be attributed to its cross browser compatibility feature. This allows websites to work perfectly on the various browsers including mobile devices and any other browsing device.
3. Drupal has a powerful taxonomy or category system. It allows you to organize and tag contents. The advance taxonomy feature with content category kit allows users to target all researched keywords from word tracker.
4. PSD to Drupal conversion utilizes Semantic coding. Semantic coding is a process of organizing all the website content in HTML language by defining all tags and Meta tags. These tags and Meta tags help the search engines to find the content immediately, thus improving the search engine rankings.
5. It is very important for your website to be compatible with all the browsers. If customers are not able to view your site due to some cross browser compatibility issues, then you are likely to lose them. However, as you convert psd to drupal this issue is taken care of well.
6. It allows you to manage the users of the site in more efficient manner. By using Drupal you can create as many custom users and access levels you need. You can create many user accounts such as administrators, webmasters, editors, moderators and even guests.
7. Drupal uses the PHP template theme by default. The Drupal allows you for unrestricted use of themes, and themes are much easier to manage inside Drupal, than in other platforms.

So, it is evident that it is much easier to convert psd to drupal and furthermore it also enhances the features of your existing website. A Drupal website is not only more professional, user friendly and dynamic but also cost effective. The conversion of website from psd to Drupal makes your website more search engine friendly and hence helps in attracting more traffic.
