PHP Developer by Rajkumar Kaushal

Article published on May 28th 2012 | Web Design

If you are planning to be a web developer, you should have heard the name PHP or PHP Developer. PHP is actually a server side scripting language which is basically involved to produce dynamic web pages. You might be dealing with static web pages for quite a long time now but if you get the chance to be a dynamic page developer, you should learn PHP. Technically speaking PHP is considered as the first server side scripting language which is associated with HTML in order to build web pages and include many wonderful features in it. PHP was originally developed in 1995 but it is getting more common nowadays. In fact now no web developer is considered a master in his filed unless he is a PHP Developer.

It is free software which could be learnt and used by anyone to prove his skills. Originally PHP stands for personal home page but now it is considered as hypertext preprocessor. While you are working with HTML, you might have noticed that some scripts of PHP has been encoded into special PHP tags. PHP is such an amazing code that it can perform almost every task what you could expect from CGI program. In history, there are many great PHP Developer which you could get inspiration from. A PHP Developer knows well all the important benefits of using this code.

If you are planning to be a PHP Developer, there are many things which you need to keep in mind. Some of them are defined here to give you some brief idea of what you may call it. A PHP Developer usually tries to take help from already built in classes and functions in a PHP scripting language. This way it will be easy for you to manage this language. Similarly it is considered better if you could make your all important steps and combine them in one consideration file. You should never avoid to sanitize the data which is going into your database. This could be done with the help of proper filters and sanitizing database manual inputs.

It is a common error which almost every beginner PHO developer do is to over comment your code. They consider it a good practice to leave note after every instruction for future reference but it will be tough for them when they see their code after some time. Last but not the least, you should try your best too use the best source editor as it will save your time.
