PSD to Joomla Conversion: a Great Package of Benefits by [Justin Spencser](#)

Article published on February 24th 2012 | [Web Design](#)

Joomla is one of the most preferred interactive open source content management systems, which is widely used across the world to host different types of websites. Be it a personal blog, a commercial web portal or an education site, Joomla is being used for all of them. The ease to install the application and upload the files has added a lot in the popularity of Joomla platform. To host a Joomla site is an easy task. Even if you do not have any technical knowledge, you can dare to host your site by your own. Besides, Joomla community offers its support 24/7. So, if you stuck upon something, you can always ask for help.

In recent couple of years, the demand for PSD to Joomla Conversion has suddenly increased. People are realizing the benefits of customizing their Joomla websites and hence, they queuing up to convert their website with the help of a Photoshop design. A PSD file is a Photoshop file. Since, now you know Joomla is a free platform and it offers a number of free templates for blogs and websites. But using the free available template may not distinguish your site from others, so people choose to customize the site appearance by converting a Photo shop file into Joomla template. While designing the Photoshop file, you can define a unique look for your website. With the help of expert web designers, you can create any creative design on Photoshop. Since, PSD file in not dynamic, it needs to be converted into HTML language and then integrated with the Joomla site. Though the process is not very tough, it requires knowledge of HTML or HTML5 so that all the elements of the PSD file can be integrated smoothly with the Joomla site. So, the PSD to HTML/Joomla conversion ensures a unique design and also allows you to manage the content on your website pages properly. Further, while converting the PSD element into HTML, it allows web designers to write the codes in SEO-friendly manner that ensure the increased visibility of the site on search engines. Thus customization and SEO-friendliness are two major advantages of converting a Photoshop design into Joomla site. Besides, W3C validation may also be an element to discuss. When designers convert a PSD to CSS/Joomla, they keep the standards decided by World Wide Consortium and follow the same while writing the codes. It simple ensures the authenticity of your site. Cross-Browser Compatibility is another benefit of PSD to Joomla Conversion. It allows you site to be functional on all the browsers. Designers write the code and make necessary changes that ensure your site is visible on all the browsers properly.

Joomla is very simple Content Management System and it allows you to manage the site with a simple control panel. With the help of one admin page, you can control all the features and functionalities of the website easily. Hiring experts for the conversion process is very affordable. You can contact any company that has been engaged in the PSD Design to HTML/Joomla conversion for long and assign your task to it.
