Why Most Businesses are Opting for Open Source Solution Company to Develop Their Business by [Pamela Jones](#)

Article published on June 8th 2012 | [Web Design](#)

An Open Source Solution Company offers customization and development of open source software. Open source software has emerged as reliable, flexible and top quality choice offered at an affordable rate. Open source software strives to put an end to predatory system of vendor lock-in and depends on distributed peer review for growth. There is an increasing trend among businesses to adopt necessary software offered by open source and customized by an Open Source Solution Company. Open source solutions offer some distinct benefits for users.

Solutions offered by an open source applications and an Open Source Solution Company are considerably cheaper than commercially licensed software in similar key areas. The savings made are particularly important when the relevant solution is accessed from several operational locations of an organization. There are many features of a commercial solution that you may never require. However, you are forced to pay for those features. An open source solution is supported by a user community with a focused IT footprint that provides specific features. This contributes in lowering costs related to adoption of technology. Subscription, training and consulting related to an open source solution may be availed as and when required. This also helps in reducing overall cost of a project.

Open source solution is not owned by a particular vendor. As such, you are free from being held hostage by a company. An Open Source Solution Company has to compete with other vendors with add-on products and services for securing a project. As a result, any user is free to switch vendor if price rise or other issues crop up. Vendors or open source solutions companies can be changed by a client depending on business requirements.

After you have selected an Open Source Solution Company you need to clarify your requirements and goals of the project. Before making a financial investment you may try to have a load test with the customized open source solution. The company may let you look at source code and link the software to a debugger for simplifying its development. If you are not satisfied with certain functions of the software change in the source code may be essential.

Open source solutions are safe. Millions of users download, test and use an open source project. With readily available source codes an Open Source Solution Company has more options for debugging and testing. However, if you are looking for an enterprise level solution then make sure that the open source software has a thriving support community available round the clock.
