A dedicated server is a single computer on a web-hosting network that is leased or rented, and dedicated to just one customer. The user rents the server, software and an internet connection from a web host. Computer system like that make the Internet possible, because it can store a lot of websites and files. Computers that access them are called clients. Without data to access, a network of clients could only send and receive email messages. They have limits to how much data and how many websites, they can store. When choosing them, there are several things to consider: Operating System, Hardware options, Space and bandwidth. Because operating system is similar to that on your own personal computer; once installed, the operating system enables one to perform tasks more simply.

There are two types of them available today: Managed and Unmanaged. We help to manage that so you can focus on your business. These are a great choice for any enterprise as they come fully managed by us. Sometimes we think that it can be an expensive proposition and suitable only for the large company with strong capital base, having a large website with a lot of traffic. But with Bagful's Managed Dedicated hosting solutions, you not only give the benefits of being on your own server, but we will also configure and maintain them for optimal performance and reliability. We help the customers in cost saving as the client doesn't need to purchase or maintain the equipments. Because they are equipped with powerful multi-core processors and boast fast RAM memory, allowing for the most complicated sites and web applications to be run without a problem.

We are giving the best opportunity to take the advantages of these servers. Both have different features. Window dedicated server hosting is excellent for hosting your website. That is because it offers you full control over it. These control features are only available to larger sites. You can install anything and reboot the system as often as you please. This is obviously beneficial to the site administrator.

On other hand, Linux dedicated servers are more affordable than their Windows counterparts. This is because the Linux software, used to power these servers, is often free. Linux dedicated servers offer lower monthly subscription rates than the alternatives; and because updates are easy to install and often come at no cost, Linux dedicated servers are able to easily update their software without high overhead. If you're looking for server that will last you the longest, and grow with you as your website grows and your demands change, we offer the best technology of Linux and window servers. You won't have to compromise on the software you use, and that means they enable greater innovation and opportunities for success.
