

Article published on December 14th 2011 | [Web Hosting](#)

Internet and web hosting have been a radical change in recent years, where he has gone from Internet pages where the content is limited to text and images to offer new content based on the streaming. At this point some questions arise for people without much experience, such as what consistene Streaming? Are traditional web hosting services are ready to support new streaming technology? Can I migrate easily from one service to another web hosting with a focus on streaming? Who are the leading candidates to use to hire a hosting plan with emphasis on streaming and full support?

Streaming technologies

â€¢ With the evolution of the Internet came many changes, leaving aside the content simple and flat text and images, to make room for more dynamism in the hand of videos, music and animations. These contents are supported by streaming technology and hosting expertise, which allows listening to music and watch movies, videos and animations in real time. Basically, the streaming does not require you to download multimedia documents, but through a browser can be consumed.

â€¢ The site uses are those that distribute streaming online videos, movies, television, home videos and personal animations. Also online radio stations and websites dedicated to online music distribution. All of them use specific web hosting services.
