Choose MySQL Services of the best web development company by Rojag John

Article published on June 18th 2012 | Web Hosting

MySQL is a very popular database management system. People who are not that experienced can also use this software without any hassle. It can be used on its own or as an element of dynamic web portals.

SQL means for Structured Query Language. SQL language is not something which is very new. This ground-breaking paper language was developed by IBMs. MySQL came into the market for Windows computers. Over the years MySQL has evolved in a hugeway and has become a key player in the highly profit driven SQL market for the database management systems of almost all sizes.

MySQL is integral fraction of LAMP suite of the open-source (i.e. free software). The L refers to Linux, which is a Unix-based operating system which runs direct competition with the very famous Microsoft Windows. In order to operate LAMP on a Windows based computers one has to do 2 different downloads, one download is for Linux and the other one is for Easy PHP encircling the residual LAMP apparatus. One can run all of these 3 components on almost any Windows-based computer, even the one which seems totally useless. In order to test the web programs ones requires a browser like Internet Explorer or Firefox. You do not require a live Internet connection in this case.

The A in the LAMP refers to Apache which is a frequently used web server. One can use Apache in conjunction with PHP and MySQL and test the programs in the live environment. The M in the LAMP is for MySQL, which is the most popularly used database management system. The Sun Microsystems bought MySQL of late for a whooping amount of 1 billion dollars. This product is still free of cost for the small as well as medium-sized systems. When the system becomes big, paying a little sum of money for the professional version should not pinch you at all.

There are so many organizations which offer PHP as well as MySQl services. But then you need not get bewildered with the number of options available. It is you who have to decide which company provides better MySQl services in the market.

There are different kinds of firms, from huge web designing companies to small in size freelancing firms. Both these categories of organizations have their own disadvantages and advantages. Just choose the one which goes well with your criteria and budget.
