Article published on January 21st 2012 | Web Hosting

In case you are planning to host your website, Virtual private hosting popularly referred to as VPS hosting is the most sought after way to go about it since is low in cost as compared to the other servers such as dedicated servers. With virtually dedicated resources and ample security features VPS has paved a way out for a refined hosting solution VPS hosting also offers better authorization. Linux VPS hosting is basically open source software and it offers the same benefits as offered in the Window VPS hosting except the differences in the Operating systems.

Benefits of Virtual private server hosting:

In case you select Virtual private server hosting, cost involved is generally not very high. You can even run your personal operating system as well as install any type of software you want on the server. You need not to worry regarding losing any data as this server is totally secure. In case you are not really happy with shared hosting, there is an option to shift to Virtual private server hosting. The Hosting server presents the top dedicated servers as opposed to the key server divided into many.

What is Windows VPS hosting?

A lot of people are relatively more familiar with Windows hosting as it was introduced in the market lot before and the administrators are more acquainted with Windows process. The Windows based hosting is generally used by huge websites or intricate applications need tailor made set up. The chief benefit which Linux hosting has as compared to Windows Virtual private server hosting is the open source software. Open source software necessitates no license and this brings down cost to a big extent. In case you want windows VPS hosting, you will have to spend money to buy the license from the Microsoft. The price is the main factor why a lot of people prefer Linux Hosting.

Know about Linux VPS Hosting:

Windows programmers like to work with Windows VPS hosting as some Windows programs do not function properly with Linux system. The internet hackers also aim websites with their nasty software and the Microsoft gets trapped in it. Linux does not get entangled with virus problems owing to its free as well as open source nature. Both Windows VPS and Linux VPS hosting are fine but itâ€™s just that you have to install the software and run the operating system in a proper manner. If you have difficulty in re-installing your operating system with Linux, there are many methods to deal with this problem.

What is good about Linux VPS hosting?

The up time is very good in case of Linux VPS hosting as compared to Windows VPS hosting because it is open software. Linux VPS Hosting is suitable for medium as well as large sized industries which have a liking for VPS hosting at a low cost. Itâ€™s both convenient and secure. Whether you go for Windows hosting or Linux hosting, be sure to select the right service provider who offers 24 /7 customer support.
