# Different Types of Web hosting Features by Albern Brooke

Article published on December 30th 2011 | Web Hosting

When good web hosting services are required, one must be wise to source out the various offerings by different web hosting providers to ensure that the web hosting deal covers all the necessary features required by the web business in question.

There are many factors of consideration when it comes to selecting the best or most suitable web hosting services such as budget, objectives, business needs, marketing strategies, hosting providers and features as well services.

## Selecting hosting services

One should consider the available web hosting features that would benefit the web business not just for today but for the near future in terms of expansion. There are various types of high-performance solutions that can cater to the web business needs such as unlimited hosting, cloud hosting, dedicated servers, reseller hosting and VPS servers.Â

There are many types of web hosting plans which come in a package of hosting features depending on the package cost.

Some web hosting packages include domains and their registration while others include email support or chat support. Web business owners can take on more than one web hosting plan to get the best of web hosting features or discuss with the web hosting providers to customize the web hosting package according to the web business needs and budget.

## General Features

Every web hosting plan has different web hosting features but all web hosting plans have general features that include a control panel, email account creation, changing password capability, webmail, transfers, databases, libraries, directories, FTP access and web file manager.

## Advanced Features

However, more advanced web hosting plans offer advanced features on top of the general features such as PHP with Zend optimizer, online database management and statistics, traffic usage report, access counters, backups on a daily and weekly basis, custom error pages and SSL support.

Any advanced web hosting package would be ensured a 99.5% uptime on the system for better business operations.

## Software Features

Some software features are usually included in any web hosting package depending on the type of web hosting plan chosen. One would be able to select from updated PHP versions, Perl, C/C++, CGI, Python, HTML script, Shockwave, XML, Flash, Applets, WAP and WMI.

Still other web hosting packages offer digital certificates support and FrontPage Extensions for those businesses that require such facilities. It is also important to consider anti spam protection as well as virus protection for as many applications used in the system to protect the business operation.

Many popular applications like WordPress, Joomla and Mambo are available with most web hosting packages.
