Article published on July 26th 2012 | Web Hosting

VPS or Virtual Private Server is a term given by hosting companies and it refers to a virtual machine. Today itâ€™s the best alternative to a dedicated server and you can avail all the features and services that of a dedicated server with very low price. As we all know public always demands the best features and service with low price. There are thousands of companies online but you need to be wise in selecting a hosting provider for your website.

Choosing a good hosting provider is an extremely important decision that you will make, but before that you need to consider many factors that are crucial prior to choosing a good hosting solution online. Just by choosing a cheap VPS server hosting is not enough, it may create many trouble for you in future. Therefore, points that are needed to be considered are security, Level of management, data transfer, and price. All should be considered as whenever choosing your hosting provider. VPS is for those persons who wants to make their online presence, expansion of business with high traffic and are not ready to pay high price.

VPS means a physical server is distributed into several virtually partitioned servers. Each server is in a physical server has its own operating system. It may be Linux or Windows. Normally public buy windows for GUI interface. As we know each server is separate from each other therefore it may be rebooted easily and at your wish. Owing to this advantage hosting companies are selling VPS to clients at extremely cheap prices. And also the clients are benefiting a lot from this.

Some good features of the cheapest VPS hosting:

â€¢ Perhaps the best feature is the low cost of setup. Three cheap VPS server hosting can be set up with the price of a dedicated server. With same features and services.

â€¢ Several websites may be hosted on the same server. It cannot be done in a shared hosting and shall be costlier if it is on a dedicated server.

â€¢ Higher control and better management when compared to shared hosting.

â€¢ As according to your requirements you may customize your server and also you can download and install applications as and when you need them.

â€¢ The uptime you get is extremely important, never compromise on your uptime otherwise itâ€™s of no use to take a cheap VPS server.

â€¢ To prevent downtime VPS hosting maintains a level of isolation.

â€¢ As on demand of the user a VPS may be scaled up and down.

â€¢ A cheap VPS server hosting offers a rapid access to recover from disaster when compared to a dedicated server. Because of the fact that a VPS can be backed up into an image.

A VPS server hosting is more robust and much more flexible in comparisons to a dedicated hosting or shared hosting services. Choose a trusted and a cheap VPS hosting provider with your required services and according to your future needs.
