Synergy of PSD to HTML and PSD to CSS for a website by Adam Parker

Article published on January 6th 2012 | Web Hosting

In the corporate world, the concept of synergy has its special implications. Synergy refers to a scenario in which a team of two or more individuals combine their efforts to achieve something which they otherwise would never have. It is popularly represented as 2 + 2 = 5 i.e. combining each of their efforts, to achieve something beyond their potential. The same is applicable to PSD to HTML and PSD to CSS conversions. If both the services are combined in a systematic way, it will provide you with the most astonishing results in the form of a superior quality, highly dynamic and animated web application.

PSD files are an acronym for photo shop design files. Photo shop gives you immense scope and tools to creatively design the look of the website. However you cannot directly upload the photo shop design file in the web browser due to compatibility issues. It is too bulky in size and is not compatible with the web browsers and neither do the PSD files provide user interaction and navigation.

However when you opt for PSD to HTML conversion, you get extremely web compatible and browser friendly website. HTML is regarded as the language of Internet and HTML elements forms the building blocks of any web page. In the process of PSD to HTML conversion, PSD files are sliced into HTML, in a highly precise and organized way. The process of PSD To HTML slicing gives the developers to divide the design into separate sections of header, footer, body etc and code them effectively.

As far as coding is concerned, PSD to CSS conversion has proved to be a blessing for the web developers. CSS is an acronym for Cascading Style Sheet language and is required to define the styling of the under developed website. Employment of cascading style sheet language for the purpose of website design and development gives the coders immense scope and flexibility. CSS defines the presentation semantics of the website, i.e. it defines how the content of the website must be displayed, in order to make it the most accessible to the human senses. Thus it defines the fonts, style, layout and etc of the website. It provides web developers with flexibility by separating the markup conversion content (the codes for PSD to XHTML or PSD to HTML etc), from the presentation content (which includes page layout, font size etc.) It also reduces the coding required by letting the users to call a similar code over and over again, thus they don't have to writer the entire code each time they need it.

A synergy between the two uplifts the standard of your desired website. PSD to CSS conversion reveals very clean, systematic and precise codes which helps your website gain W3C validation. This validation is a prerequisite and attests that your website will run efficiently in the long run. Besides PSD to HTML conversion makes your website extremely cross browser compatible and make sure that online users are able to access your web application throughout any browser like Mozilla, Safari, Opera, Chrome, IE etc. The profitable benefits doesn't end there. Effective PSD to HTML conversions ensures Search Engine Optimization. Each of the web pages of your website as optimized to be crawled by the search engine spiders. With the effective use of relevant keywords in the URL, image alt tag, H1, H2, H3, H4 tags and the smart use of Meta tags and etc, professional developers gives you a highly web optimized website. Good SEO ranking ensures a steady high volume of organic traffic to your website, and thus increases your possibilities for trade and commerce. In addition to that PSD to CSS conversion gives reduces the coding required for creating the website. The coding involved has direct impact on the loading time of the website. Thus with fewer and systematically arranged coding structures, the website is loaded quickly across different web browsers which helps you attract and sustain more and more users. The solutions are

highly pixel perfect and gives your website amazing appeal.

For a gainful web experience convert PSD to HTML combined with PSD to CSS conversion and enjoy long term success in the online business venture.
