Understanding the web hosting term by Shiv Kumar

Article published on December 15th 2011 | Web Hosting

To understand website hosting and all related things, when you are new to the world wide web, can be a bit difficult. The process of getting your website on the Internet is really pretty easy once you begin to understand how it works. Hopefully we can make things a bit more user friendly for you by going over some of the basicterminology in web Internet hosting.

Domain Name: Domain names are known as online identity for a website. When someone is looking for anything and does a search on the web for a specific word or phrase a list of websites will pop up. When you choose a domain name name be sure to include a keyword or phrase in the title so that more people looking for your offering will find your site.

Web Host: A web host is a service provider which provides online space for our website. In order for your site to be seen on the web you will need a web hosting provider. Before you select which web host to use, you may want to call their tech support and ask them questions so you can be sure that you choose the best one. Because there are so many web hosting providers out there it is best that you do some research ahead of time.

SQL (MySQL, SQL Server etc.): SQL means Structured Query Language. This is what is used to interact with the database. You do not need to know a lot about this in the beginning however you may want to make sure that the hosting provider you choose has this option.

HTTP: HTTP stands for Hyper Text Transfer Protocol. This is the protocol which manages the transfer of web pages from one place to another.

HTML: HTML means Hyper Text Markup Language. This is the workings or back office, so to speak, of your website. This language is what makes your website show text and images. Once you begin to get more in tune with the net you will learn this pretty quickly.

FTP: FTP stands for File Transfer Protocol. This is what you will use to send your website pages and files from your home computer to your website hosting servers. It is basically your file transfer tool.

Disk space: This is the known as the space on your own system's hard drive. Hosting provider will store a certain amount of space for your website, usually in Megabytes (MB) or gigabytes (GB). Make sure that how much you can store on your website.

Bandwidth: This is known as the amount of data that can be retrieved from your website. This is important to know when seeking a web hosts. Most of will usually offer unlimited bandwidth or they will state the total amount that can be used before subsequent charging will begin. If it is not unlimited, find out how much you get before charging begins.

There are Providers out there that offer free website creation, so you can get your website up right away without any technical knowledge. Once you have more knowledge under your belt then you can begin to build your own site to your specifications and needs.

Also remember that the Internet is only one of the best source of information. If you come across any term that you need clarification on, just pull up your favorite search engine and do a search for anything you want answers to. If you are Looking for information on the website hosting India term, We will provide you helpful information with great explanation(Webhostings.in).
