Article published on March 2nd 2012 | Writing

Fonts play important role in everyoneâ€™s everyday life. Doesnâ€™t matter that a person is using a computer or not, they all are indirectly or directly linked with fonts and used in their daily life. In fact, not only once in a day we all make use of fonts many times. For an instance we can say that, when we chat on messenger or while typing a cover letter or while making use of MS Word we are actually playing between the fonts. It is not must that we will get all types of fonts in our personal computer, but when we start doing any typing work you definitely require a unique font style.

Updating, replacing, installing or deleting fonts is very simple and easy. Any person can easily add or update extra fonts in their tablets, laptops, cell phones, computer devices. To download free fonts you have to find a good font sites which will give you the unique and stylish fonts which you actually want.

Thickness of a character

Font thickness ranges from light to bold. Thickness of the font is also known as weight of the font. For example â€“ All of us are familiar with the font named â€œboldâ€• which clearly depicts the weight of th content. There are many other types of free fonts available namely, italics, times roman new etc. All the web designers, graphic designers, computer programmers, engineers use many fonts of different weight or thickness to do their work. Some of the thickness styles are: Bold, Light, hairline, thin, Medium, Block, Heavy, Black, normal, extra black, extra light.

Stretch of a Character

By stretch of a character we mean the width of the character. Spacing between the characters represents the width of the character. Some of the popular types of stretch are: Extended, Wide, Narrow, Ultra, compressed, extra and ultra.

Angle of a Character

Angle of a character represents the slope of a character. Generally typefaces of European are represented with the help of slope. Many of the characters donâ€™t show any change with the change in the angle, but the appearance of the characters changes with the change in t he slopes. For example, gaining swash will lose the original appearance of the character.

Optical size

These sizes range from 72 to 8 point. These types of fonts are generally used by Adobe users.

Here you will get to know about all the characteristics of the fonts.
