How to Choose a Font for Content by Jane Cyrus

Article published on January 18th 2012 | Writing

Everyone while writing content look for free and creative fonts for their websites. Adding fonts is a best way to dress up your site. If you want unique and stylish fonts, you can use these fonts in order to make your designs stand out. But you should take care of one thing that if you are using fonts for you projects, itâ€™s important that you should first read the licensing agreement.

One can easily choose the fonts according to the specific category like from comic, cartoons, western, decorative, horror, curly, eroded, Fire/Ice, distorted, groovy and many more and according to the content they can modify. Other than these categories, many special and creative free fonts are also available namely, Penn Station, Jetson, Submerged, Clawripper, VTKS Low Rider, Counter Flipper, Deborah, Deborah Condensed and many more. Remember that you are not suppose to add more than two or three fonts to your website because if you do so then it will go away from your design and will look awkward. Itâ€™s good to select some fonts and stick with them while working on entire site.

The only Procedure to download the fonts is:

Select the type of font

And simply click on download option

Now you can easily used the type of font you have downloaded in your content to attract the readers.

The font packages in the website are available in compressed .zip file in order to reduce the size of the files to make downloading quicker. You can open or unzip the .zip file by double clicking the icon.

Steps to install font for normal Windows

To install the fonts under windows, all you have to follow is:

1) Save the Downloaded zip file.

2) Go to that place and unzip the file by double clicking after that click on â€œExtract hereâ€• option.

3) You will get all the files of the fonts from the .zip file.

Steps to install font for Window 7/Vista

Select the files - .otf, .ttf or .fon. Right click the file and click on Install.

Steps to install font for any version of Mac OS X

For all types of users, you need to first convert all the files (.ttf or .otf) and then drag the fonts into system folder.

After installing these fonts you will be able to give an attractive look to your content and dressed up your website with unique and stylish font designs by downloading free fonts.
